

## Decorating Polystyrene Products

We have a number of polystyrene products to use as templates to decorate. You can also recycle packaging you may receive in parcels to add to collages or cut out hanging decorations.

We hope you find this instruction guide useful to get the most out of the products.

As you may have found out, painting and sticking on to polystyrene is not that easy, the easiest way is to do as follows:

Mix PVA Glue with a little water to make it thinner

Paint the mixture over the poly surface and leave to dry

Tear up some tissue or crepe paper in to small pieces

Layer the tissue paper on to the surface and paint over the glue mix

Keep layering and gluing until the whole surface is covered, leave to dry

This is now ready for you to add your decorations or to paint.

Another way is to cover with material such as:

Wide Ribbon

Burlap (Jute) Roll

Felt Sheets

You can then glue or sew items on to make the decoration.

We would love to see your creations, please share them with us on our Social Media Pages.
